

# Upgrade Secret Server Cloud now to unlock stronger security and greater uptime

The upgrade to Secret Server on the Delinea Platform empowers you with centralized identity management for improved visibility, greater control, a stronger security posture, and 99.995% uptime.

80%

of customers say Vaulting via Secret Server is the most common Delinea Platform use case\*

Why? Because Secret Server on the Delinea Platform takes the friction out of day-to-day identity management. It centralizes control, standardizes authentication, and reduces the operational burden on security teams while keeping your data and integrations intact and creating no disruptions for your vault users.

## Streamlined, consolidated access management

Secret Server on the Delinea Platform eliminates the limited views and fragmentation behind access management. Instead, you get centralized visibility into who has access to what, better control over users, and simplified workflows. You also get stronger security capabilities.

### Greater efficiency

User management, permissions, and roles are unified in one place, giving you:

- ▶ Automated and centralized workflows

**74%** of customers have more time for strategic identity security initiatives

- ▶ Reduced tool sprawl

**94%** of customers say the Delinea Platform has consolidated their tool stack

- ▶ Improved consistency and control

**18%** increase in security team productivity levels

### Time-saving enhancements

Platform-level authentication introduces new capabilities and better supports workflows, offering you:

- ▶ Centralized collection of audit logs and automated reporting

**33%** less time spent preparing for audits and compliance tasks

- ▶ Better visibility of identities and straightforward access controls

**43 hours** of labor saved per week on average per customer

- ▶ Clearer insights and easier workflow with third-party integrations

**29%-34%** time savings reported by users across all key workflows

“ Moving to a unified Secret Server environment gave us a single source of truth for sensitive access. It reduces risk and strengthens our ability to meet compliance requirements.”

Sridharan Rangasamy, Xactly Corp.

## Everything you already rely on – plus more opportunities

- ➔ Your vault stays intact. Secrets and permissions don't change. Integrations remain configured.
- ➔ Audit trails continue to be visible.

	What stays the same on the Delinea Platform	What you gain with the upgrade
<b>Vault structure</b>	Vaults, folders, secrets, and permission models remain intact	No re-architecture required. Your existing configuration runs on a modernized control plane
<b>Secrets and rotation</b>	Automated credential rotation policies keep functioning as configured	Greater scale for vaulted secrets and credential rotation, making it easier to extend proven policies across larger, more distributed environments
<b>Integrations</b>	Existing integrations stay configured and operational	Access to out-of-the-box marketplace integrations break down silos
<b>IAM framework</b>	Custom roles, policies, and configurations are preserved	Your current setup is ready for gradual expansion into additional use cases
<b>Audit trails and history</b>	Historical logs and compliance records continue to be visible	Enhanced real-time visibility across sessions, identities, and privileged activity

If you choose, you can opt in to get advanced, context-aware AI capabilities to automate routine work and help administrators operate more efficiently.

## Get security gains with minimal effort

For current Secret Server Cloud customers, Secret Server on the Delinea Platform is only a few steps away. For most environments, the upgrade takes less than two hours, with no downtime or changes to your existing configurations.

- ▶ To start your guided upgrade workflow, navigate to Settings in your Secret Server Cloud UI, then open the [Platform Upgrade Center](#).
