IDENTITY THREAT PROTECTION

Identity Threat Protection

Quickly identify unusual behaviors with high-quality insights into the most vulnerable identities to reduce the impact of compromise

The modern digital environment has expanded exponentially, making security teams responsible for assessing, detecting, and responding to threats in highly complex and changing IT environments. Bad actors can blend in by using legitimate credentials to walk in the front door, impersonate a legitimate identity, and go undetected until they decide to attack.

Many organizations lack effective security controls to detect and contain bad actors' activities, enabling them to navigate the attack chain to reach your most sensitive assets.

Organizations are embracing Identity Threat Detection and Response (ITDR) as a must-have security category designed specifically to protect your identity attack surface. Identity Threat Protection builds context across the identity layer to discover and remediate threats in real-time, delivering high-quality insights that help Security Operations leaders limit the impact of identity-related threats.

HOW IT WORKS

Discover

Connect into your entire traditional, hybrid, and multi-cloud environment to find all your identities — human and machine. Uncover and fix identity misconfigurations before they can become part of an attack.

Detect

Normalize or baseline user behavior across your identities to detect anomalous behavior indicative of a potential compromise. Use AI-driven risk scoring to highlight the danger and impact of identity-related threats.

Respond

Mitigate risk with a comprehensive view of identity, enabling improved response with recommended actions or automation to reduce the impact.

Protect

Elevate your identity posture by continuously discovering and evaluating identity threats, new users, and evolving user behavior.

Identity Threat Protection Benefits

PROACTIVELY DETECT

Monitor for anomalous behavior to understand which identities are most vulnerable to account takeover or compromise and fix them proactively

REMEDIATE

Rapidly shut down a suspected attack in progress by pulling access, resetting credentials, or requiring additional authenticaiton, and alert security operations for follow up

IMPROVE OPERATIONAL EFFICIENCY

Better equip security operations to respond to incidents and reduce the workload with high-quality identity insight and context

UNIFY ADMINISTRATION

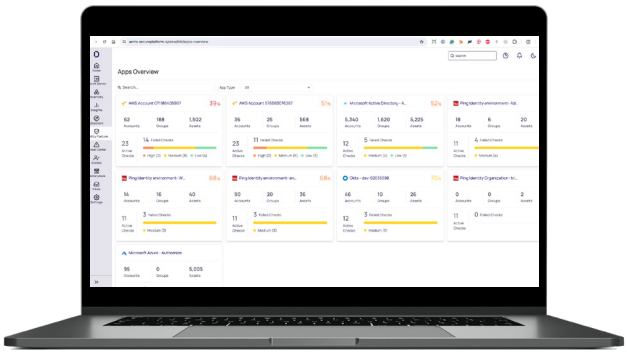
Delivered on the cloud-native Delinea platform with a comprehensive view of identity for fast time-to-value and lower total cost of ownership

Identity Threat Detection is delivered on the Delinea Platform to detect and address identity-related threats proactively.

Build context across the identity layer to discover and remediate threats in real-time, delivering high-quality insights that help Security Operations leaders limit the impact of identity-related threats.

Decrease response times through a single view of identity data with continuous monitoring of activities, reducing the impact of account takeovers such as MFA bombings, brute-force attacks, and related incidents across systems, software-as-a-service (SaaS) and cloud. Integrate high-quality identity threat insight seamlessly into your existing security operations signals.

Identity Threat Detection gives Security Operations teams the vital identity context they require to quickly investigate and remediate attacks.



CONTINUAL DETECTION

Discover identity misconfigurations and anomalous behavior across federated and local identities.

BUILD CONTEXT

Visualize identity access pathways across identity systems, software-as-a-service (SaaS) applications, the cloud, and traditional infrastructure.

REMEDIATE THREATS

Take recommended actions or automate responses to reduce the impact of an attack.

The flexibility and agility to scale PAM security controls on your own terms

Essentials

Get started by identifying, managing, and vaulting privileged accounts, with the ability to set rules to request access to credentials and monitor and audit privileged remote access sessions.

Standard

Continue your PAM journey by protecting against identity threats, applying just-in-time and just enough privileges, and enforcing MFA at depth.

Enterprise

Increase automation and intelligence across your authorization policies to further reduce identity-related risk and improve productivity.

Delinea

Delinea is a leading provider of Privileged Access Management (PAM) solutions for the modern, hybrid enterprise. The Delinea Platform seamlessly extends PAM by providing authorization for all identities, controlling access to an organization's most critical hybrid cloud infrastructure and sensitive data to help reduce risk, ensure compliance, and simplify security. Delinea removes complexity and defines the boundaries of access for thousands of customers worldwide. Our customers range from small businesses to the world's largest financial institutions, intelligence agencies, and critical infrastructure companies. **delinea.com**
