Privilege Management for Workstations

Secure access for agencies. Seamless for business users.

User workstations are an enticing entry point for cyber criminals. They use malware, ransomware, and other strategies to effectively infiltrate agency IT environments through workstations, and then leverage that access to move laterally and inflict damage to critical systems.

Delinea’s Privilege Manager delivers best-in-class, centralized privilege management that fortifies security — starting with the workstation. It empowers agencies to rapidly apply Zero Trust (ZT) principles, just-in-time access, and just-enough privilege for an agile framework that defends the agency and mission today and tomorrow, regardless of operating system (OS) or domain. Privilege elevation and integrated application control support productivity while mitigating cyber threats. Because today’s mission cannot wait, the solution also delivers centralized, fast-start privileged access management (PAM) via an intuitive interface.

**Privilege Manager Benefits**

- **Implement and enforce zero standing privileges (ZSP) for risk-based security**
  - Implement just-in-time, just-enough privilege elevation and default least privilege to prevent lateral movement of attackers.
  - Remove excess privileges and permanently control which accounts are members of any local group.
  - Continuously discover applications and processes tied to privileged accounts.

- **Create granular application control policies**
  - Allow people to use applications they need to do their jobs, without requiring local admin rights.
  - Enable central, policy-based controls with threat intelligence, and dynamic allow/deny lists and sandboxing.
  - Apply least privilege model with real-time application analysis to enforce Zero Trust principles.

- **Offload IT resources**
  - Avoid helpdesk tickets with policy-based privilege elevation.
  - Reduce hardware issues with more uniform and standardized workstations.
  - Maintain productivity through integrations with ServiceNow, Active Directory, SIEM/SysLog, and more.
  - Automatically discover, apply policies, and remove all admin credentials from domain and non-domain workstations, including Windows, Mac, and Unix/Linux.

- **Achieve robust auditing and reporting**
  - Enable enterprise analytics and out-of-box reporting on users and machines.
  - Leverage centralized responsive and actionable reporting dashboard and application event logging.

- **Deploy at cloud speed and scale**
  - Manage and update thousands of machines effortlessly.
  - Scale deployments elastically within our flexible architecture.

**Privilege Manager Benefits**

- **IMPRESS SECURITY**
  - Protect privileged accounts to tighten your attack surface and build resilience

- **UNBURDEN IT TEAMS**
  - Control PAM easily with an intuitive interface and streamlined design

- **ENSURE COMPLIANCE WITH FEDERAL POLICIES AND MANDATES**
  - Comply with FICAM, M-22-09 Zero Trust strategy, NERC CIP -007-6 standards, NRC Regulation 5.71 C.3.3.1, and National Counterintelligence Strategy

- **SCALE YOUR PAM PROGRAM**
  - Deploy elastically within Delinea’s enterprise-secure architecture
Set policies based on agency security and mission requirements

Delinea's Privilege Manager is the most comprehensive privilege elevation and application control solution for workstations, delivering just-in-time access with the right level of access controls needed to support the rigorous workflows of modern agencies while defending against persistent and increasingly complex security threats. With Delinea's seamless privilege controls you can easily and rapidly implement least privilege access controls to defend against malware attacks and leverage automated policy-based application controls to maintain productivity. In addition, detailed and actionable reporting documents progress and compliance for agency leaders and auditors.

- All-in-one solution for least privilege management, threat intelligence, and application control
  - Manage domain and non-domain workstations
  - Manage and remove local admin rights
  - Allow, deny, restrict, and elevate applications
  - Centralize management and visibility across decentralized IT environments

An edition designed for every organization, available on-premise or in the cloud

The flexibility and agility to scale PAM security controls on your own terms

PRIVILEGE MANAGER
On-premise
Intelligent PAM to meet cybersecurity policies and least privilege best practices and compliance obligations

PRIVILEGE MANAGER
Cloud
Enterprise-Grade PAM-as-a-Service that scales to support agencies' digital transformation as they modernize at scale
