Delinea + StrongDM

Identity security that delivers zero standing privilege at enterprise scale

The problem you can't ignore

Your attack surface has fundamentally changed. AI agents operate autonomously at machine speed. Developers move fast across cloud infrastructure, containers, and CI/CD pipelines. And dormant, over-privileged credentials sitting across your environment are compounding risk every single day.

Most organizations have built a strong PAM foundation, but that foundation wasn't designed for a world where non-human identities outnumber humans and standing privilege has become the attack vector of choice. The need for Zero Standing Privilege has never been more critical.

Delinea +StrongDM changes that.

A new class of identity security platform

Together, Delinea + StrongDM form a unified identity security platform built on three operational fundamentals. Discover every identity. Quantify and reduce risk where it matters most and enforce access dynamically with just-in-time, least privilege controls.The result is ZSP as an operational reality that is achievable without disrupting your existing tech stack investment.
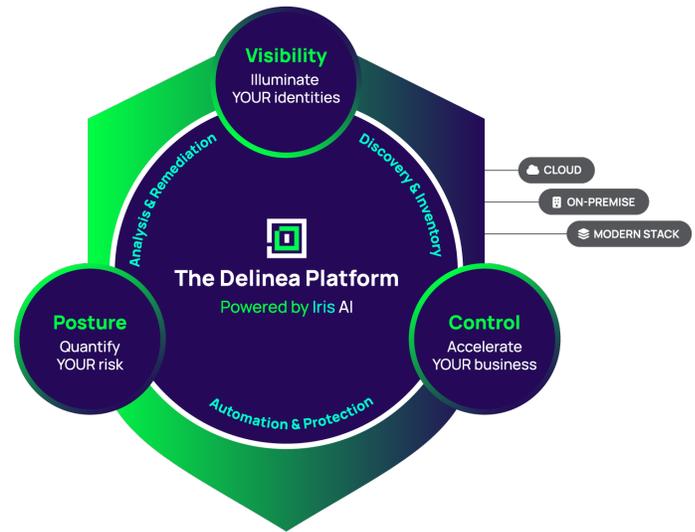

Identity security at scale

Delinea	strongdm Now part of Delinea	Delinea + strongdm Now part of Delinea
● Discovery & mapping of all identities	● Just-in-Time, proxy-injected credentials	**Zero standing privilege as an operational reality**
● Privileged Access Management	● Context aware enforcement	✓ **Lowest possible risk enviroment**
● Host-level privilege controls	● Continuous runtime authorization	✓ **Reduce attack surface** ✓ **Real-time compliance**
● Access governance & AI-driven controls	● Frictionless access for DevOps & engineers	✓ **Enable productivity** ✓ **Remove complexity**
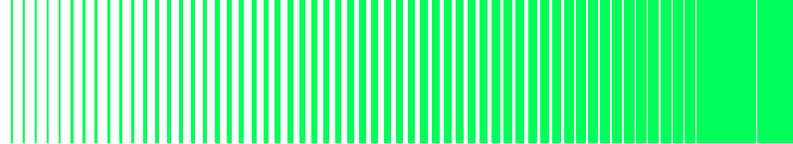

Why it matters for your organization

1. **Reduce Risk:** Eliminate standing privilege The #1 vector that enables lateral movement by attackers.

2. **Enable Velocity:** Developers and AI agents move faster with secure, just-in-time access.

3. **Prove Compliance:** One audit trail across every identity and every session; always on, always current.

4. **Protect Investments:** Extend your existing current tech investment; no disruption.

Automation & Protection

You've always known what your policies say. Now you'll know exactly what happened for every identity, every session, across every environment, Delinea +StrongDM.

Ready to close the standing privilege gap?

Talk to a specialist and see how Delinea + StrongDM deliver ZSP across your enterprise — starting with the infrastructure you already have.

Delinea

Delinea is a pioneer in securing human and machine identities through intelligent, centralized authorization, empowering organizations to seamlessly govern their interactions across the modern enterprise. Leveraging AI-powered intelligence, Delinea's leading cloud-native Identity Security Platform applies context throughout the entire identity lifecycle – across cloud and traditional infrastructure, data, SaaS applications, and AI. It is the only platform that enables you to discover all identities – including workforce, IT administrator, developers, and machines – assign appropriate access levels, detect irregularities, and respond to threats in real-time. With deployment in weeks, not months, 90% fewer resources to manage than the nearest competitor, and a 99.995% uptime, Delinea delivers robust security and operational efficiency without compromise.
