

# Protect Your IT Admins from Compromise

Secure privileged access for IT admins and protect them from identity threats

The cloud-native Delinea Platform provides seamless, centralized authorization to secure and govern credentials and access to systems and data, eliminating gaps in IT admin protection.

## Challenge

Modern enterprise IT environments include administrators who access sensitive systems and data from a variety of devices often across a global geography. With distributed systems spanning both on-premises and cloud environments, maintaining visibility into IT admin access and monitoring for misconfigurations becomes increasingly difficult. As your organization grows and you rely more on third-party services and contractors, it becomes more challenging to manage sprawling admin credentials due to lack of centralized oversight.

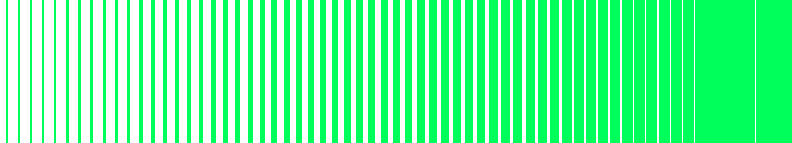

Manual identity provisioning and de-provisioning processes, along with inefficient governance and access risk management for IT applications, result in orphaned accounts, privilege creep, and overlooked fraud risk. All of this complexity leaves gaps for attackers to exploit. Attackers are not just targeting your most privileged users; all it takes is one compromised admin identity to bypass most security solutions and move laterally throughout your organization

## Solution

The Delinea Platform is the only cloud-native identity security solution that delivers intelligent, centralized authorization to reduce risk, ensure compliance, and enhance productivity. Designed to enable growth while enhancing identity security with unified visibility, improved efficiency and security, streamlined management, and increased productivity, the Delinea Platform meets you where you are with everything you need when you need it.

## Key Use Cases

- ✓ **Protected Credentials**  
Protect and monitor all IT admins accounts
- ✓ **Privileged Secure Access**  
Provide secure access with the right privileges to applications
- ✓ **Zero Standing Privilege**  
Centrally define and manage policies to grant IT admins the access they need, only when they need it, for the job they need to do
- ✓ **Identity Lifecycle & Governance**  
Automatically provision access during onboarding, assess risk, review and adjust access when users change roles or leave
- ✓ **Discovery & Inventory**  
Deliver comprehensive visibility over all IT admin identities, credentials, and access
- ✓ **Identity Posture & Threat Analysis**  
Detect active threats and minimize the impact of compromise

## Outcome

Using the Delinea Platform to protect IT admins helps to reduce the risk of breaches and misuse of accounts, enhancing security and addressing compliance requirements. It boosts IT admin productivity and satisfaction by streamlining identity processes, enabling operational agility. Delinea's IT admin protection solution enables organizations to more confidently deploy resources to agile cloud and hybrid environments and, enable users to get achieve their work goals while lowering the overall attack surface.

## Solution Capabilities

- Vault admin credentials securely
- Audit and record sessions for post-event follow up and review
- Enforce MFA across complex systems and applications
- Utilize behavioral and predictive analytics to better secure admins
- Intelligently automate access provisioning
- Provide Just-in-Time (JIT) and lease privilege access for admins
- Analyze and address access risks in critical business applications
- Continuously discover new admins and overprivileged users
- Manage admin sessions to ensure least privilege
- Detect and respond to compromised identities
- Provide high-availability access for IT admins during emergencies

## Why Delinea

### We make you more secure

Accelerated adoption through seamless authorization controls

### We make you more productive

Requiring 90% fewer resources to manage than the nearest competitor

### We futureproof identity security

Guaranteed 99.99% uptime & zero downtime upgrades on Delinea's cloud-native architecture

## Delinea

Delinea is a pioneer in securing identities through centralized authorization, making organizations more secure by seamlessly governing their interactions across modern enterprise. It applies context and intelligence throughout the identity lifecycle, across cloud and traditional infrastructure, data, and SaaS applications to eliminate identity-related threats. Delinea uniquely provides intelligent authorization for all identities, allowing precise user identification, appropriate access assignment, interaction monitoring, and swift response to irregularities. The Delinea Platform accelerates adoption and boosts productivity, deploying in weeks, not months, requiring just 10% of the resources compared to competitors.
