

Protect Your Workforce from Identity Compromise

The cloud-native Delinea Platform provides seamless, centralized authorization to secure and govern credentials and access to systems and data, eliminating gaps in workforce protection

Challenge

Modern enterprise workforces include employees, contractors, and vendors who access SaaS applications from personal workstations and mobile devices, and frequently work remotely. All it takes is one compromised workforce identity for an attacker to bypass most security solutions and move laterally throughout your organization. It's no longer just privileged users who are at risk, attackers are now casting a wider net.

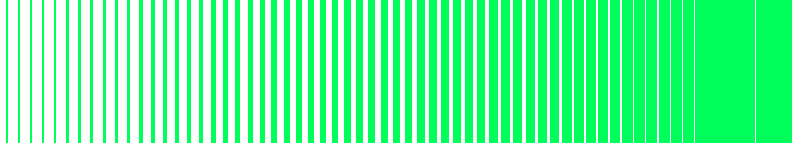

As organizations operate across distributed systems spanning both on-premises and cloud environments, maintaining visibility into business user access, risk, and misconfigurations becomes more complex. With expanding teams and growing reliance on third parties and contractors, managing sprawling workforce credentials becomes more difficult without a centralized approach. Manual processes for managing identities, coupled with inefficient access controls and governance can lead to orphaned accounts, privilege creep, and overlooked fraud risks. These vulnerabilities create opportunities for attackers to exploit gaps in your security, putting your organization at risk.

Solution

The Delinea Platform is the only cloud-native identity security solution that provides seamless, centralized visibility and control over workforce identities, access, credentials, and workstations to reduce risk, ensure compliance, and enhance productivity. Protect your entire workforce across your hybrid cloud infrastructure – from user workstations to application access – and continuously monitor identity posture.

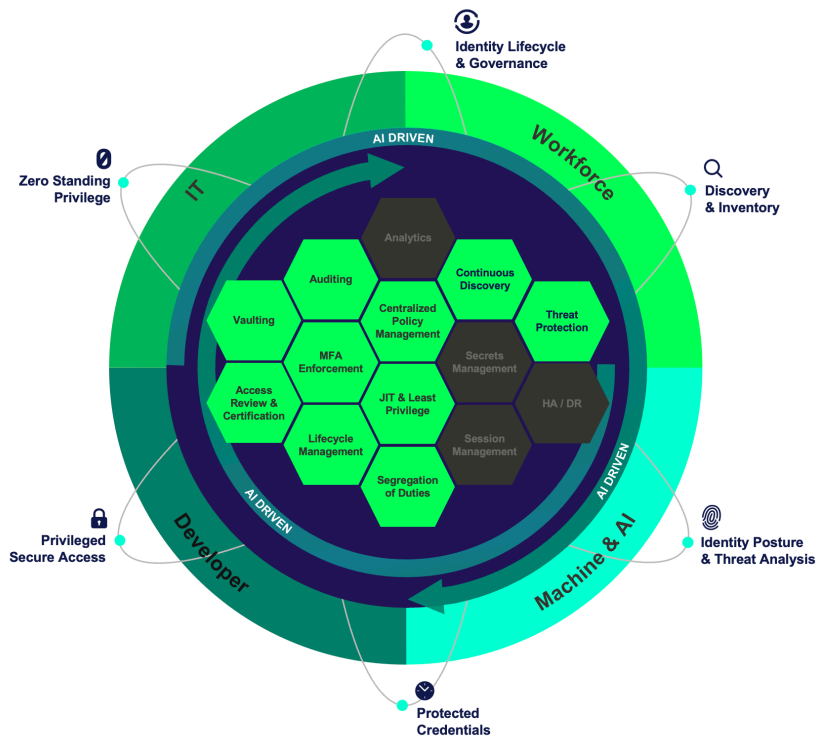

Key Use Cases

- ✓ **Protected Credentials**
Protect and monitor all workforce accounts
- ✓ **Privileged Secure Access**
Provide secure access with the right privileges to applications
- ✓ **Zero Standing Privilege**
Centrally define and manage policies to grant workforce identities the access they need, only when they need it, for the job they need to do
- ✓ **Identity Lifecycle & Governance**
Automatically provision access during onboarding, assess risk, review and adjust access when users change roles or leave
- ✓ **Discovery & Inventory**
Comprehensive visibility over all workforce identities, credentials, and access
- ✓ **Identity Posture & Threat Analysis**
Detect active threats and minimize the impact of compromise

Outcome

Using the Delinea Platform to protect workforce identities helps to reduce the risk of breaches and misuse of accounts, enhancing security and addressing compliance requirements. It boosts employee productivity and satisfaction by streamlining identity processes for both business users and IT administrators, enabling business agility. Delinea's workforce protection solution saves time and lowers operational costs through automation to accelerate onboarding, role transitions, access reviews, and risk analysis.

Solution Capabilities

- Vault business user credentials securely
- Intelligently automate access provisioning
- Automate access reviews and enforce least privilege
- Protect business user workstations from ransomware with just-in-time privilege elevation
- Continuously monitor identity posture
- Detect and respond to compromised identities
- Analyze and address access risks in critical business applications

Why Delinea

We make you more secure

Accelerated adoption through seamless authorization controls

We make you more productive

Requiring 90% fewer resources to manage than the nearest competitor

We futureproof identity security

Guaranteed 99.99% uptime & zero downtime upgrades on Delinea's cloud-native architecture

Delinea

Delinea is a pioneer in securing identities through centralized authorization, making organizations more secure by seamlessly governing their interactions across modern enterprise. It applies context and intelligence throughout the identity lifecycle, across cloud and traditional infrastructure, data, and SaaS applications to eliminate identity-related threats. Delinea uniquely provides intelligent authorization for all identities, allowing precise user identification, appropriate access assignment, interaction monitoring, and swift response to irregularities. The Delinea Platform accelerates adoption and boosts productivity, deploying in weeks, not months, requiring just 10% of the resources compared to competitors.
